MARIA RÓŻKOWSKA

GORIZDRONIA SOSHKINAЕ SP.N., A NEW TYPE SPECIES OF GORIZDRONIA RÓŻKOWSKA, 1969

The genus Gorizdronia Różkowska, 1969 was based on the species Nalivkinella profunda Soshkina, 1951 non Soshkina, 1939. Assigning some of the specimens, described by Soshkina (1939, 1951) to a separate genus, the present writer acknowledged thereby their specific distinctness, but neither erected a new taxon, nor designated a holotype of the new species.

To state precisely the taxonomic situation of the units discussed and to avoid any mistakes under the conditions when species of the same original name, differing only in the date of publication, are type species of two genera, the writer introduces hereby a new specific name, *Gorizdronia soshkinae* sp.n. for the specimens described by Soshkina (1951, Pl. 1, Figs 1—5) and for those described by Różkowska (1969, illustrated in Pl. 4, Figs 1 and 2, in Text-figs 31, A—E and not illustrated).

Thus, *Gorizdronia soshkinae* sp.n. is hereby designated as a type species of the genus *Gorizdronia* Różkowska, 1969.

The specimen, illustrated by sections 2—25 in Soshkina’s work of 1951, Pl. 1, Fig. 2a, b from the Famennian of Ural, is designated as a holotype of the species *G. soshkinae* sp.n.
