Two new trilobites from the Treskelodden Beds of Hornsund (Vestspitsbergen)

Halszka Osmólska

Two new trilobites: *Ditomopyge roemeris* spitsbergensis n. subsp. and *Paladin trigonopyge* n. sp. are described. *D. roemeris* spitsbergensis seems to indicate the Upper Carboniferous age for these beds, as its close relatives *D. roemeris roemeris* (v. Moeller, 1867) and *D. grunewaldtii* (v. Moeller, 1867) are known from the Gzhelian Stage of the Urals, Donetz Basin and Voronezh Region (USSR).
