

## Desmidopora and Nodulipora: misfits in the coral world

Jan H. Stel and Klemens Oekentorp *Acta Palaeontologica Polonica* 25 (3-4), 1980: 403-417

Skeletal morphology and its variation are described in *Desmidopora alveolaris* and in *Nodulipora acuminata*. The features of these Sllurian fossils suggest sclerosponge affinities. Pores are present in both species and the surface of *Nodulipora* carries astrorhizae. A comparison is made between skeletons of sclero, sponges and tabulates: favositids are interpreted as the skeletons of sponges.

**Key words:** Sclerospongiae, morphol0l;y, taxonomy, relationships, Silurian.
