

## Lower Cretaceous megaspores from northern Poland

Marta Waksmundzka

*Acta Palaeontologica Polonica* 27 (1-4), 1982: 147-156

Described are eight megaspore species from the Lower Cretaceous sediments of northern Poland, among them one new combination. The described taxa represent genera : *Minerisporites*, *Arcellites*, *Hughesisporites*, *Erlansonisporites*, *Verrutrites* and *Trileites* (*Triletes*). The megaspore wall morphology has been examined in SEM.

**Key words:** megaspores , wall morphology, Lower Cretaceous, Poland.
