

La phylogenie des Cynodontes gomphodontes

Bernard Battail

Acta Palaeontologica Polonica 28 (1-2), 1983: 19-30

The anatomical study of Late/Early Triassic forms leads to consider that the gomphodont cynodonts are split into two major lineages deriving from a common ancestor, one lineage comprising the Traversodontiidae, and the other comprising the Diademodontidae and Trirachodontidae.

Key words: cynodonts, Triassic.
