

Hypsodonty in the Pleistocene ground sloth *Megalonyx*: Closing the “diastema” of data

Steven E. Fields

Acta Palaeontologica Polonica 54 (1), 2009: 155-158 doi:<http://dx.doi.org/10.4202/app.2009.0116>

Hypsodonty in Pleistocene ground sloths was reported by Bargo et al. (2006), but no data was provided for megalonychids. Herein, hypsodonty indices (HI) are presented for 22 *Megalonyx* specimens (mean = 1.06, SD = 0.10), and statistical analysis suggests that there were no significant changes in HI during the ontogeny or phylogeny of the genus during the Pleistocene.
