SUPPLEMENTARY ONLINE MATERIAL FOR

A new species of saurolophine hadrosaurid dinosaur from the Late Cretaceous of the Pacific coast of North America

Albert Prieto-Marquez and Jonathan R. Wagner

Published in *Acta Palaeontologica Polonica* 2013 58 (2): 255-268.
<http://dx.doi.org/10.4202/app.2011.0049>

SOM_1. The three new additional characters added to the character data of Prieto-Márquez (2010) for inferring the phylogenetic position of *Saurolophus morrisoni*.

SOM_2. Character state coding of *Saurolophus morrisoni*.

SOM_3. Character state coding of characters 287 through 289

References

SOM_1

The three new additional characters added to the character data of Prieto-Márquez (2010) for inferring the phylogenetic position of *Saurolophus morrisoni*.

287. Lateral profile of the dorsal margin of the rostrum (Prieto-Márquez, 2008): convex (0); straight to gently concave rostrally (1); deeply concave (2).

288. Frontal platform extending posterodorsally to form finger-shaped ramus that buttresses the underside of a nasal crest (Bell, 2010): absent (0); present (1).

289. Premaxilla, contour of the anterolateral thin everted oral margin: subangular (0); broadly arcuate in subadults and/or adults (1).

SOM_2

Character state coding of *Saurolophus morrisoni*. 286 of these characters correspond to the taxon-character matrix presented in Prieto-Márquez (2010). Characters 287 through 289 are defined in SOM_1. Codings for all other taxa are as in Prieto-Márquez (2010), except those in SOM_3.

SOM_3

Character state coding of characters 287 through 289 for the 49 iguanodontian (47 hadrosauroid) taxa other than *Saurolophus morrisoni* included in the phylogenetic analysis.
