*Acta Palaeontologica Polonica* 69 (2), 2024: 281-302 doi:<https://doi.org/10.4202/app.01129.2023>

A taxonomic revision of the Tribe Aequipectini from the upper Burdigalian, Lower Miocene Pirabas Formation in Brazil) resulted in an identification of *Leptopecten daideleus* comb. nov., *Perapecten tetristriatus* and description of *Iemanjavola monlafertei* gen. et sp. nov. The genus *Perapecten* is re-validated, *P. tetristriatus* being the first fossil representative of the genus, extending it back to the Early Miocene of the western Atlantic Ocean and Middle Miocene–Pliocene *Perapecten scabrellus* from the Mediterranean Sea/Central Paratethys is included into *Perapecten*. We also reported the oldest record of *Leptopecten*, which along with *Perapecten*, seem to have originated in the Early Miocene tropical region of the western Atlantic Ocean. *Leptopecten* dispersed during the Middle or Late Miocene to the eastern Pacific through the Central American Seaway, while *Perapecten* spread across the North Atlantic into Europe via the Circumtropical Current and the Gulf Stream/North Atlantic Drift.

**Key words:** Bivalvia, Pectinidae, *Leptopecten*, *Perapecten*, *Iemanjavola*, Central American Seaway, ocean currents, Miocene, Pirabas Formation, Brazil.
