

Oxfordian idoceratids (Ammonoidea) and their relation to *Perisphinctes* Proper

Wojciech Brochwicz-Lewiński and Zdzisław Różak
Acta Palaeontologica Polonica 21 (4), 1976: 373-390

An attempt is made to reconstruct the evolution of idoceratids (Perisphinctidae) during the Oxfordian. The subgenus *Nebroditis* (*Passendorjeria*) is supposed to be the ancestor of *N. (Mesosimoceras)*, whilst *N. (Enayites)* subgen. n. of *N. (Nebroditis)* and possibly of *Idoceras planula* group. Both genera appear to be of European origin. Differentiation of Mediterranean and Submediterranean perisphinctidae appears questionable.
