

## New finds of stegosaur tracks from the Upper Jurassic Lourinhã Formation, Portugal

Octávio Mateus, Jesper Milà, Michael Romano, and Martin A. Whyte

*Acta Palaeontologica Polonica* 56 (3), 2011: 651-658 doi: <http://dx.doi.org/10.4202/app.2009.0055>

Eleven new tracks from the Upper Jurassic of Portugal are described and attributed to the stegosaurian ichnogenus

*Deltapodus*. One track exhibits exceptionally well-preserved impressions of skin on the plantar surface, showing the

stegosaur foot to be covered by closely spaced skin tubercles of ca. 6 mm in size.

The *Deltapodus* specimens from the Aalenian of England represent the oldest occurrence of stegosaurs and imply an earlier cladogenesis than is recognized in the body fossil record.
