

## A blind phacopid trilobite from the Famennian of the Holy Cross Mountains

Błażej Berkowski

*Acta Palaeontologica Polonica* 36 (3), 1991: 255-264

*Trimerocephalus interruptus* sp. n. from marly limestones of Famennian age in the Holy Cross Mountains is characterized by a cephalon typical for late species of *Trimerocephalus* and a pygidium typical for *Dianops*. The preservation of articulated trilobites in Salterian positions in slowly deposited marl of Kowala suggests their infaunal mode of life.

**Key words:** trilobites, Phacopida, Devonian, Poland, taphonomy.
